PRACTICAL - 14

Aim:

To write a code using RAW sockets to Implement packet sniffing.

Code:

```
from scapy.all import sniff
from scapy.layers.inet import IP, TCP, UDP, ICMP
def packet_callback(packet):
if IP in packet:
    ip_layer = packet[IP]
    protocol = ip_layer.proto
    src_ip = ip_layer.src
    dst_ip = ip_layer.dst
protocol_name = " "
if protocol == 1:
  protocol_name = "ICMP"
elif protocol == 6:
  protocol_name = "TCP"
elif protocol == 17:
  protocol_name = "UDP"
else:
  protocol_name = "Unknown Protocol"
print(f"Protocol: {protocol_name}")
print(f"Source IP: {src_ip}")
print(f"Destination IP: {dst_ip}")
print("_" * 50)
sniff(iface = "Wi-Fi", prn = packet_callback,
      filter = "ip", store = 0)
```

O/P :

Destination IP : 224.0.0.251

Protocol : TCP

Source IP : 172.16.11.15

Destination IP : 172.16.8.1

Protocol : UDP

Source IP : 172.16.11.136

Destination IP : 239.255.255.250

Result :

Thus, the python was successfully executed using python socket programming.
